

AWA WILDLIFE TRENDS ANALYSIS FOR 2020

Wildlife Industry Trends and Analysis

➤ African Wildlife Auctions and it's business units analysis of the trends and statistical data for the wildlife industry

➤ Presentation 2020
Analysis

Wildlife Industry Trends and Analysis

- The Wildlife Industry has seen some unprecedented changes in the past four years with the biggest impact in 2020 due to COVID-19.
- From the boom days in the industry in 2015 and 2016 to a complete change and reset in the market in 2017 with the downward trends continuing in 2018, 2019 and 2020.
- Although we believe that the changes in the wildlife industry the past few years are mainly due to normal market principles of supply and demand, the industry were further impacted in general by the uncertainty regarding property ownership in South Africa and continued drought in certain areas. 2020 Auctions were all severely impacted by COVID-19.
- 2020 Year will always be remembered as the year of COVID-19 and the wildlife industry was impacted severely as most industries in the world.
- Revenue values are now back to values achieved in 2009, quantities of game to numbers to 2013 numbers and average pricing of game back to values as seen in 2007.

Wildlife Industry Trends and Analysis

- Due to the proliferation of auction houses, it has become more and more difficult to obtain data from certain auction houses and specific auctions. The data we compiled and present in this document we however believe is a fair indication of the market trends in the South African wildlife industry.
- Although certain outside factors contributed to the drastic reduction in prices of, for example colour variances, we believe the main reason for the price reset was the huge increase in supply of these species without an equal increase in demand.
- The industry needs to ensure that it creates a demand for these species or we will continue to see a decline in certain specie prices. This will stabilize once the supply and demand ratio has been restored.

Wildlife Industry Trends and Analysis

- Current market indicators and trends, for all 2020 game auctions, indicate that the market has continued to contract severely and was further impacted in 2020 due to COVID-19.
- Total revenue of game sale from auctions were as follow:
 - - 2018 declined by 37% to R598m;
 - - 2019 declined by 21% to 472m;
 - - 2020 declined by 59% to R196m due mainly to COVID-19.
 - The revenue reduced from R979m in 2017 compared to the all time high of R1,9 billion in 2015
- Quantities of colour variances on auction in 2018 showed a significant increase of animals but the trend reversed during the 2019 and 2020 with these species quantities reduced substantially during this period.

1. Summary of revenue Wildlife Industry

<u>Year</u>	<u>Value</u>	<u>Quantity</u>	<u>Average</u>
2001	R52 857 575	8 972	R5 891
2002	R74 144 021	12 220	R6 067

Wildlife Industry Trends and Analysis

TOTAL AUCTION INDUSTRY(Rare and Plains Game)

➤ Total revenue generated from game sales:

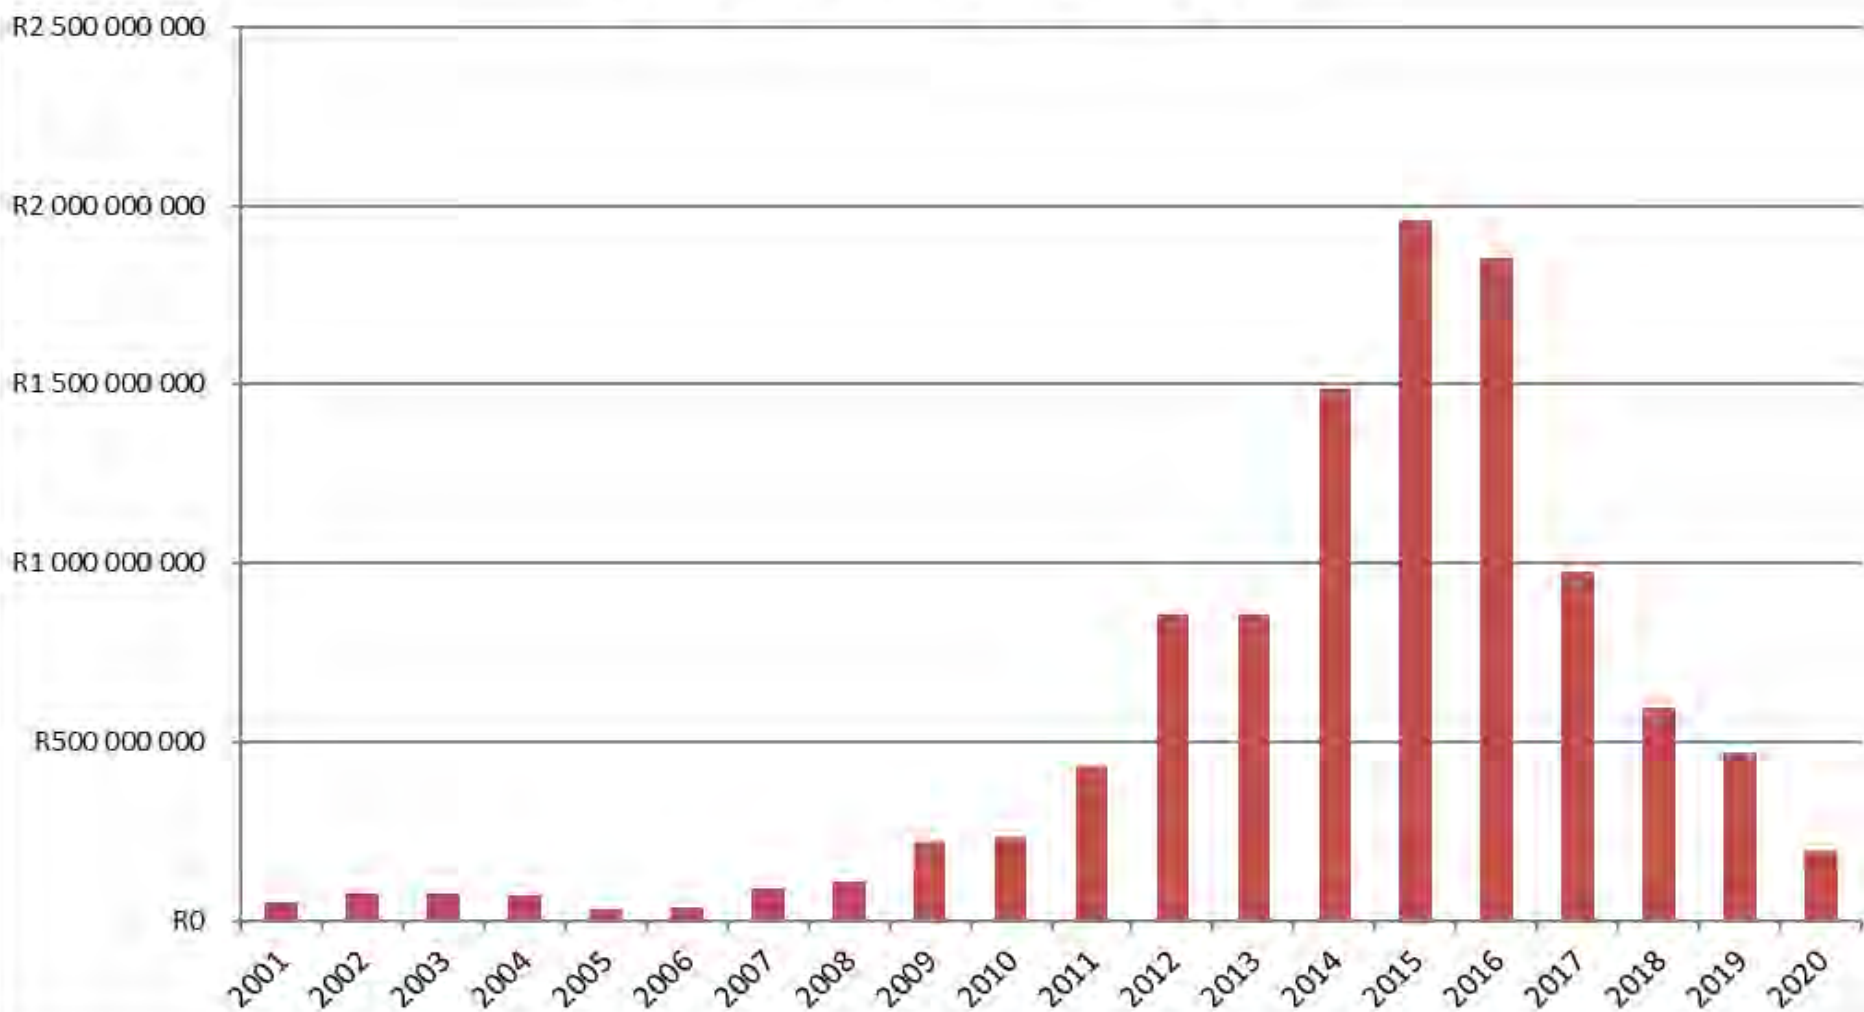

- 2017 revenue declined by 47%.
- 2018 revenue declined by 39%.
- 2019 revenue declined by 21%.
- 2020 revenue declined by 58,6%.

➤ Total number of animals sold on auction:

- 2017 quantities increased by 3%.
- 2018 quantities declined by 20%.
- 2019 quantities increased by 5%.
- 2020 quantities declined by 37%.

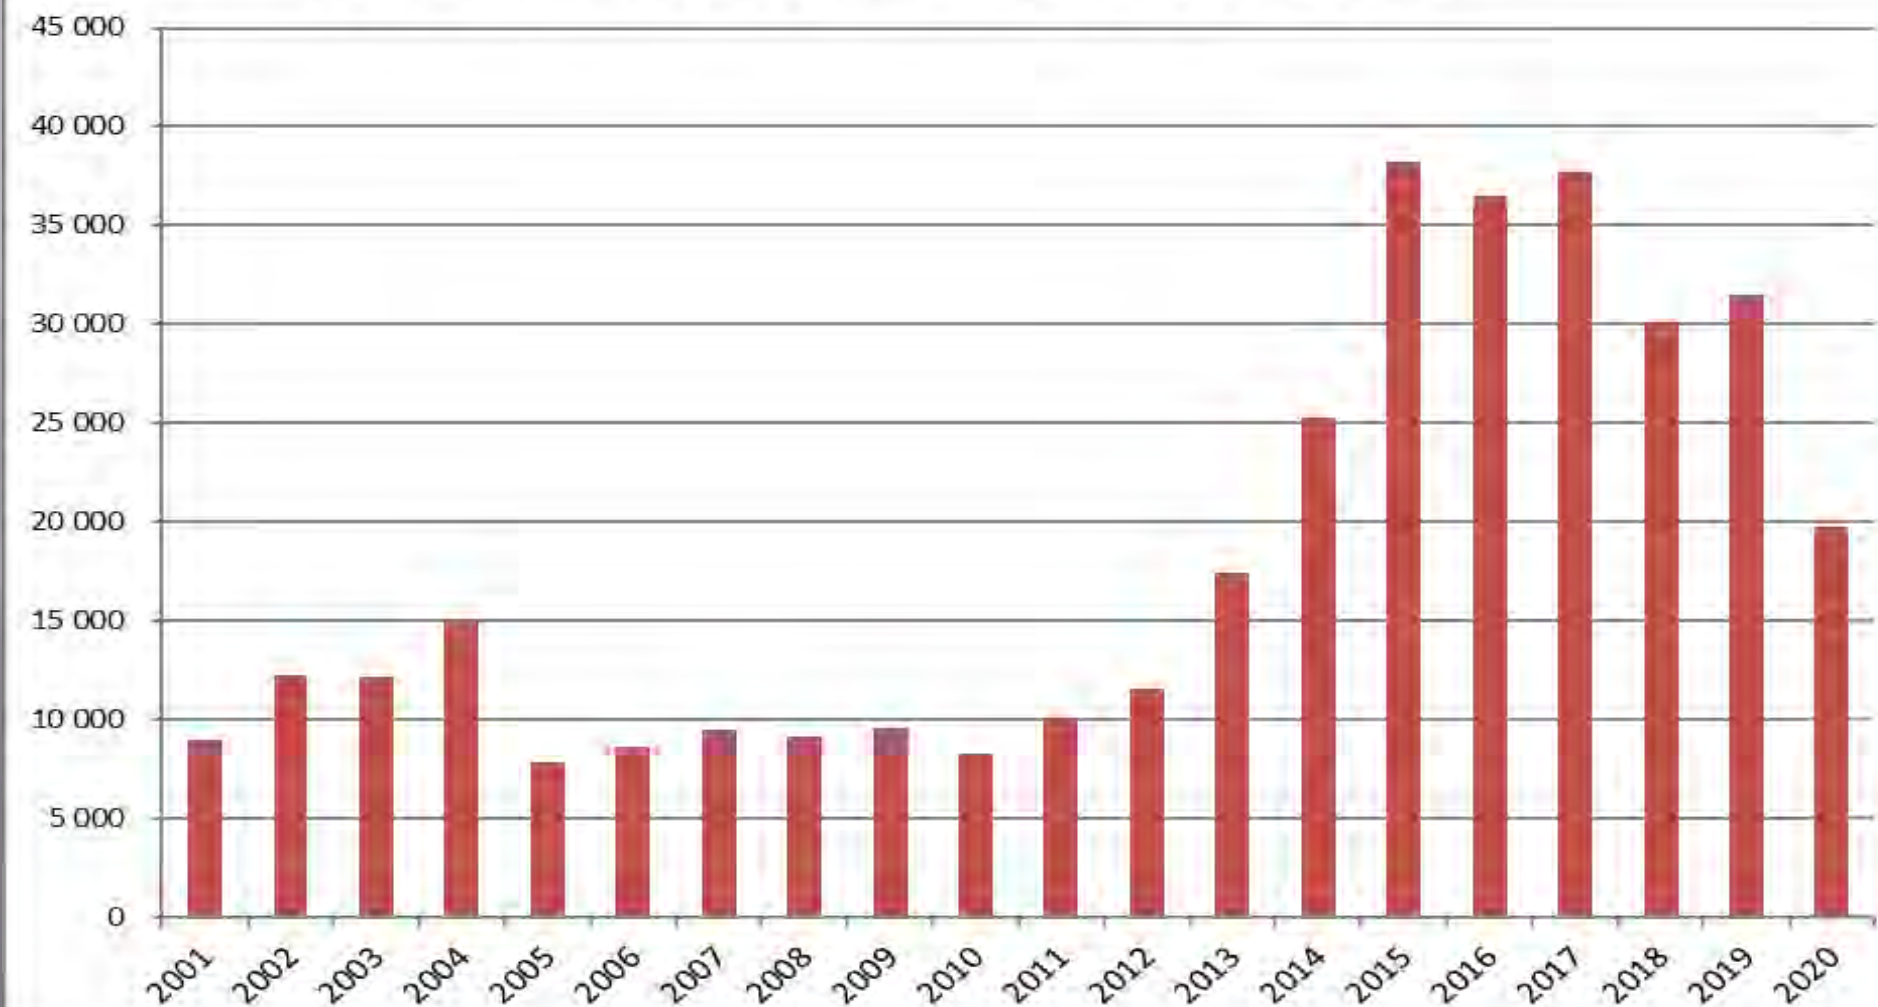

Total Revenue for the year

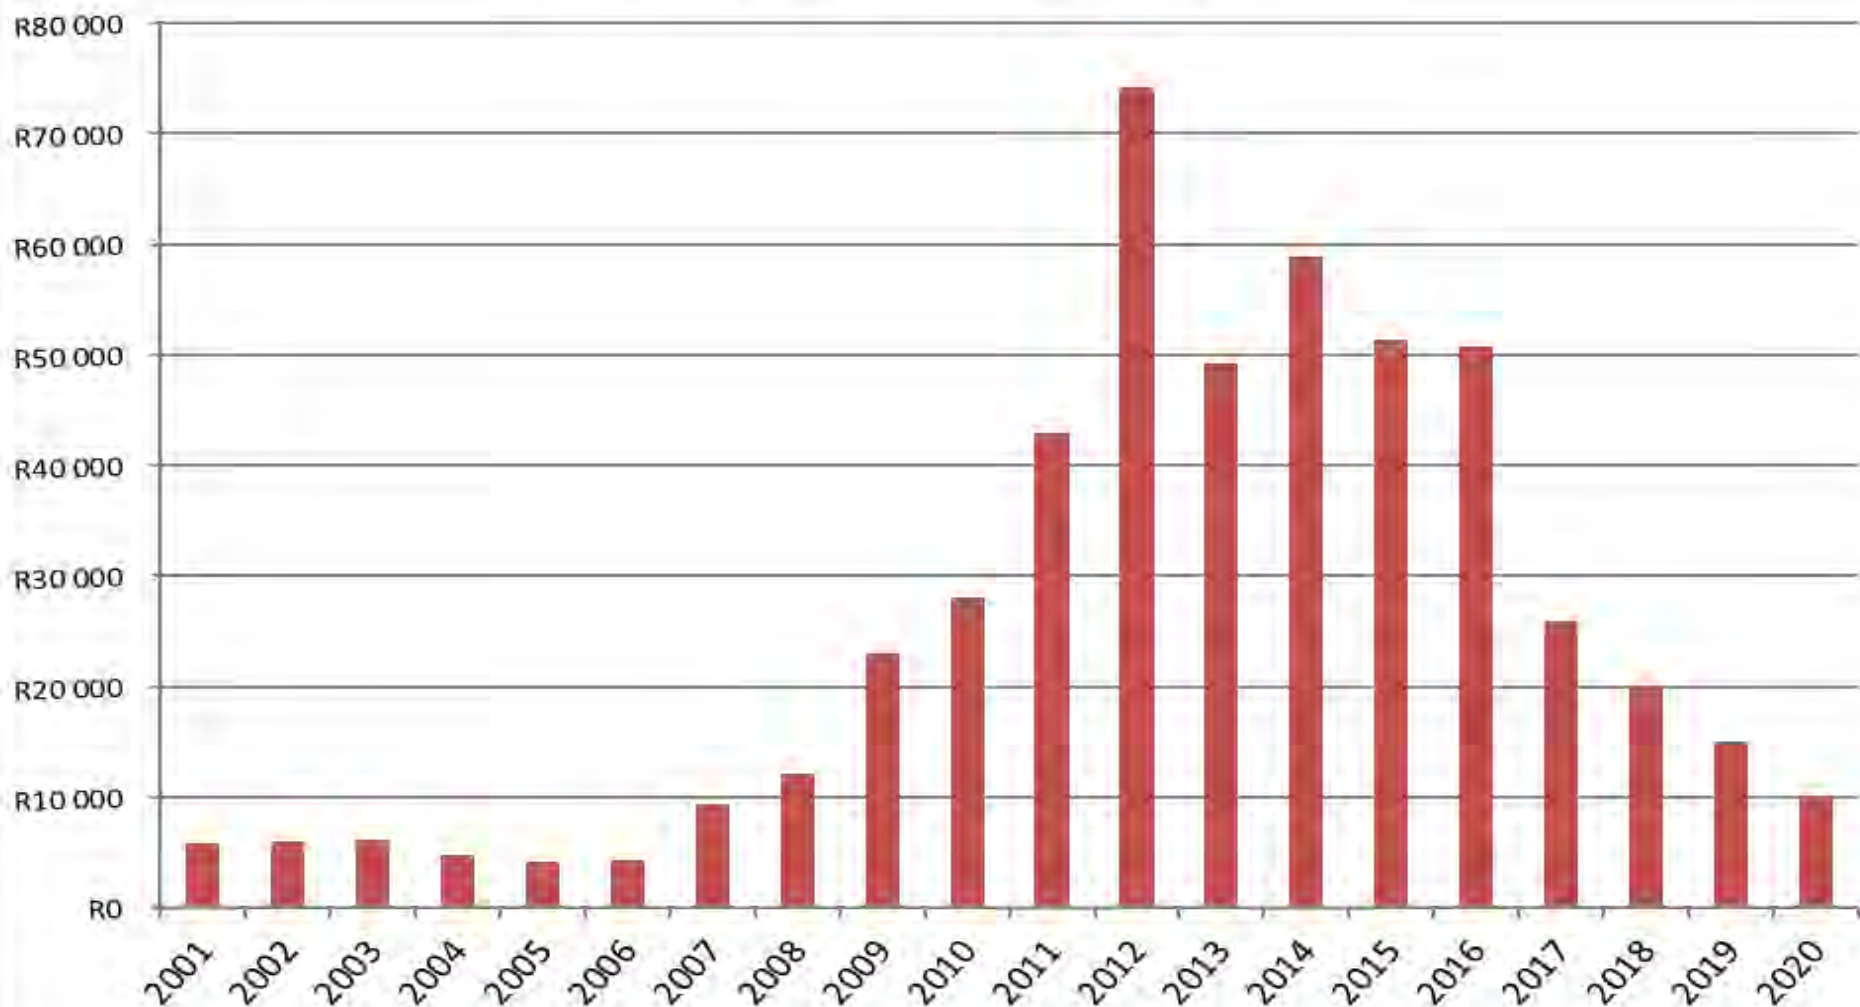

Total Quantity of animals sold per year

Total Average pricing per animal

Pricing Trends of game on auction - Rare Game

- Detailed analysis of the rare game prices over the past four years indicated that the trends in the colour variance market are different from the rest of the rare game market.
- Statistical data were analysed in detail per specie, per category for colour variances and rare game species.
- Interesting trends emerged out of these analysis.
- We believe these trends and analysis can assist the game farmers with their planning and marketing of their game in 2021 and into the future.

Colour Variance Market Analysis (Golden Wildebeest, Black Impala etc.)

- Pricing of most colour variance species in 2020 are now at an average of between 1% to 2 % of the value received for the same species in 2015/2016.
- These trends are specific to those colour variances that have a growing market for the hunting industry.
- Certain other colour variance species like Saddleback Impala and Kings Wildebeest have a very limited demand in the hunting industry and therefore we have seen much higher reduction in prices for these species.
- Currently these species are only achieving 1% and less of their market prices achieved in 2015/2016.
- This analyses is measured by taking a specific animal's credentials in 2015/2016 and compare those pricing to current prices in the market to similar credentials in 2020.

Non Colour Variance Analysis (Buffalo, Sable, Roan etc.)

- Analysis performed with data available indicated that the Sable, Roan and Buffalo species prices have also materially been affected the past three years, although not to the extent we have seen in the colour variant market reductions.
- These species on average are now selling at 5% to 10% of value achieved during the peak of 2015/2016. The price of Sable and Roan species seem to have stabilised during 2020.
- Prices in the Buffalo sales vary substantially from week to week in 2020, which is a clear indication that the stability in the Buffalo market has not yet settled and will continue to be volatile in 2021.
- These analyses are measured by taking a specific animal's credentials in 2015/2016 and compare those pricing to current prices in the market to similar or same credentials as were achieved in 2020.
- The top end of the market in these species showed a similar trend currently to the lower end of the market for these specific species.

3. Summary of revenue Wildlife Industry - Rare Game			
<u>Year</u>	<u>Value</u>	<u>Quantity</u>	<u>Average</u>
2000	R0	0	R0

Wildlife Industry Trends and Analysis

TOTAL RARE GAME ON AUCTION

- Total revenue generated from rare game sales:
 - 2017 revenue declined by 50%.
 - 2018 revenue declined by 40%.
 - 2019 revenue declined by 25%.
 - 2020 revenue declined by 63%.
- Total number of rare game animals sold on auction:
 - 2017 quantities increased by 25%.
 - 2018 quantities declined by 18%.
 - 2019 quantities declined by 14%.
 - 2020 quantities declined by 36%.

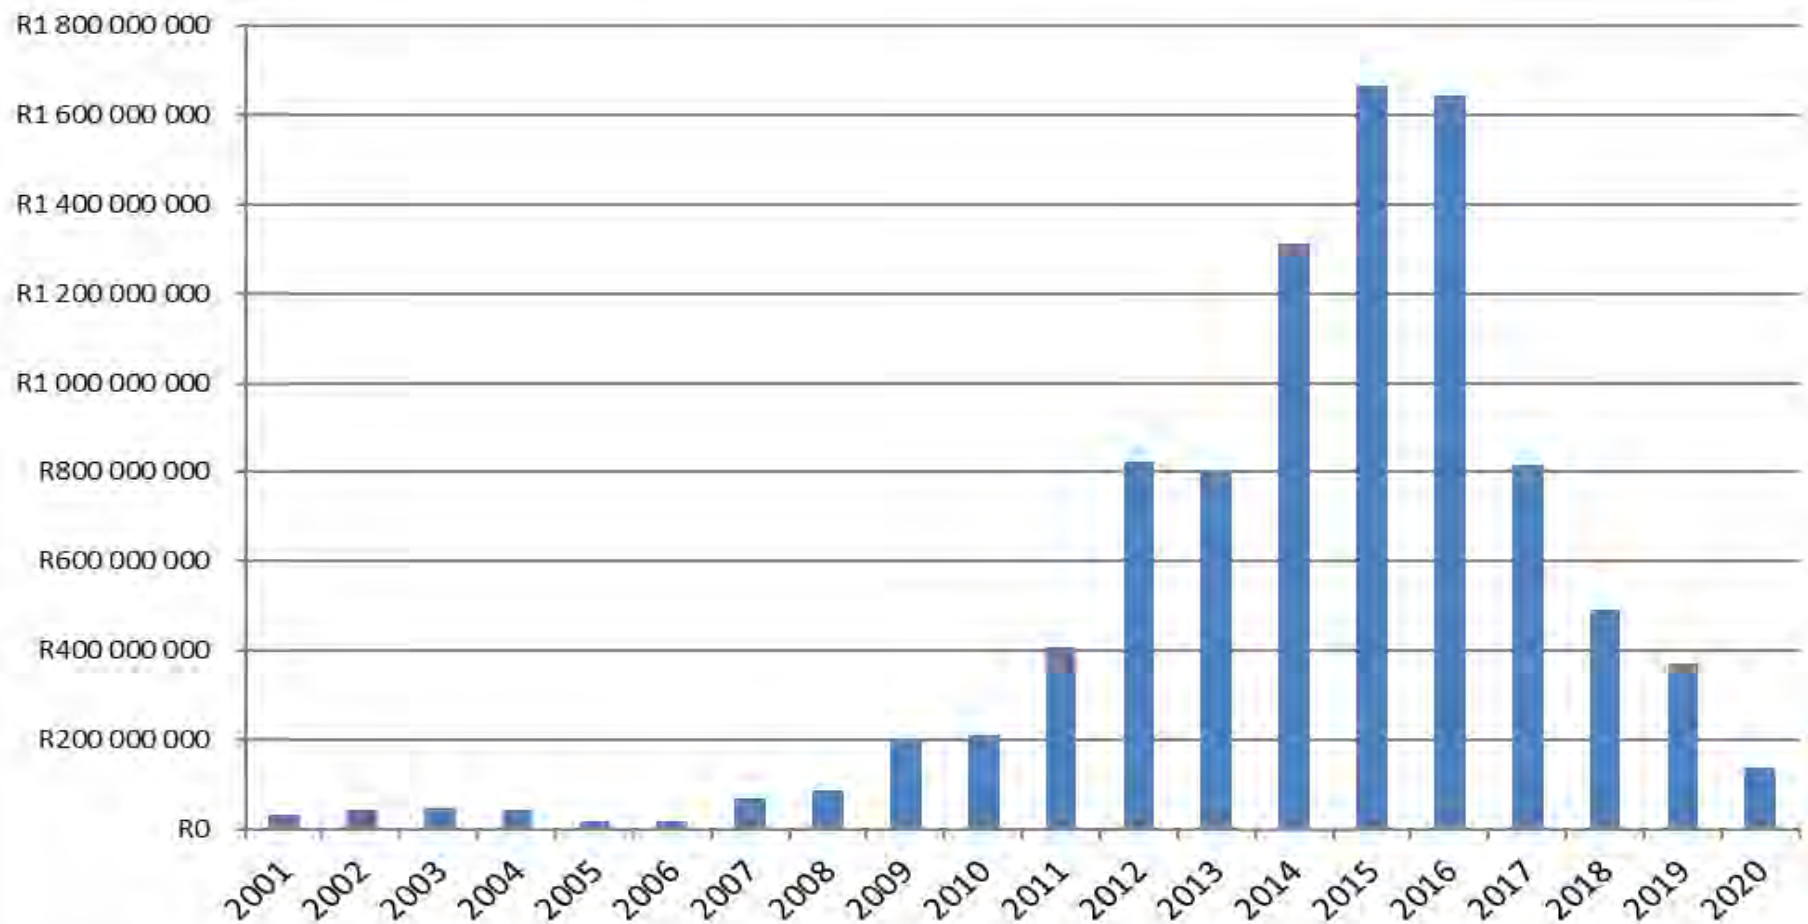

Wildlife Industry Trends and Analysis

➤	<u>Price comparison: Rare Game</u>	<u>Price%</u>	<u>Quantity%</u>
▪	Rhino	+ 8%	+ 45%
▪	Tsessebe	+ 6%	+ 2%
▪	Livingston Eland	- 5%	- 53%
▪	Saddleback Impala	- 24%	- 48%
▪	Roan	- 25%	- 24%
▪	Black Impala	- 23%	- 17%
▪	Golden Gemsbuck	- 27%	- 60%
▪	Golden Gnu	- 25%	- 8%
▪	Sables	- 37%	- 34%
▪	Buffalo	- 51%	- 40%
▪	Kings Wildebeest	- 58%	+ 11%
▪	TOTAL RARE GAME	- 25%	- 24%

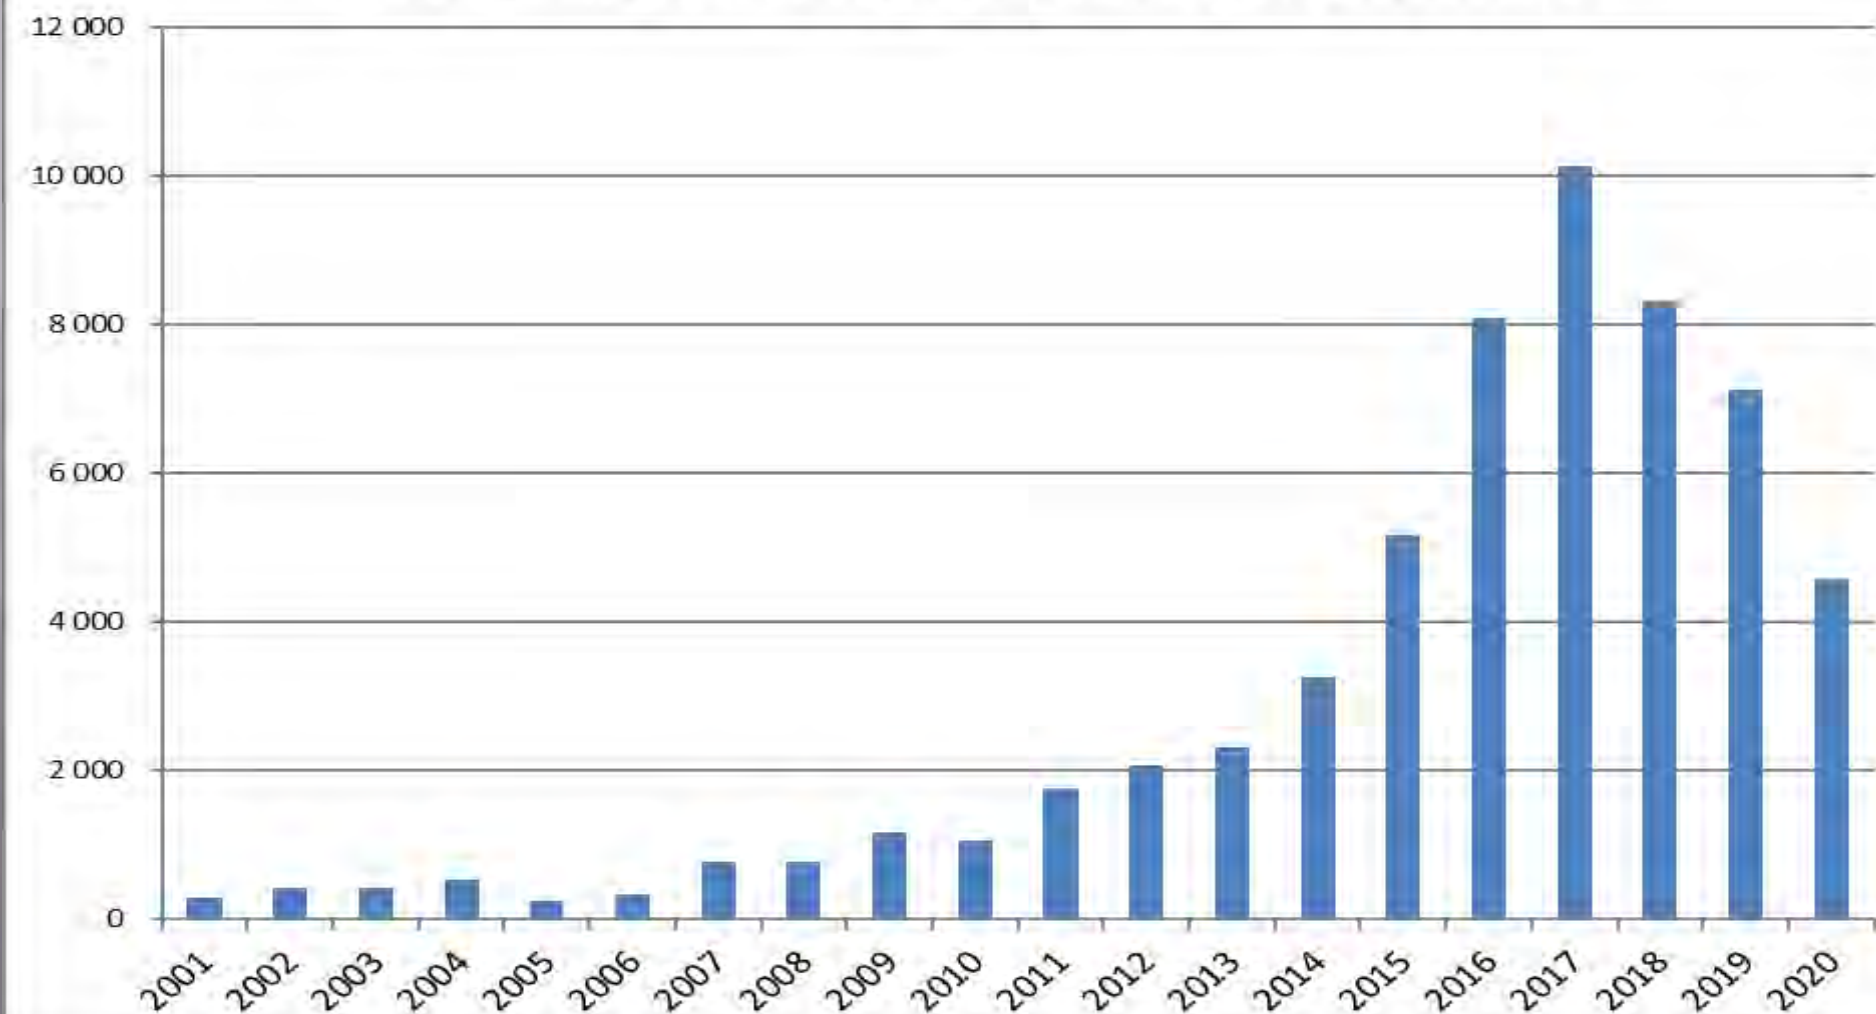

Buffalo and Sables average prices were impacted the most during the 2020 calendar year. We believe sables prices have stabilised but we still see some instability in Buffalo prices in the coming year of 2021. Rhino and Tsessebe were the only two species that have seen an increase in average prices during 2020.

Rare Game Auction Revenue per year

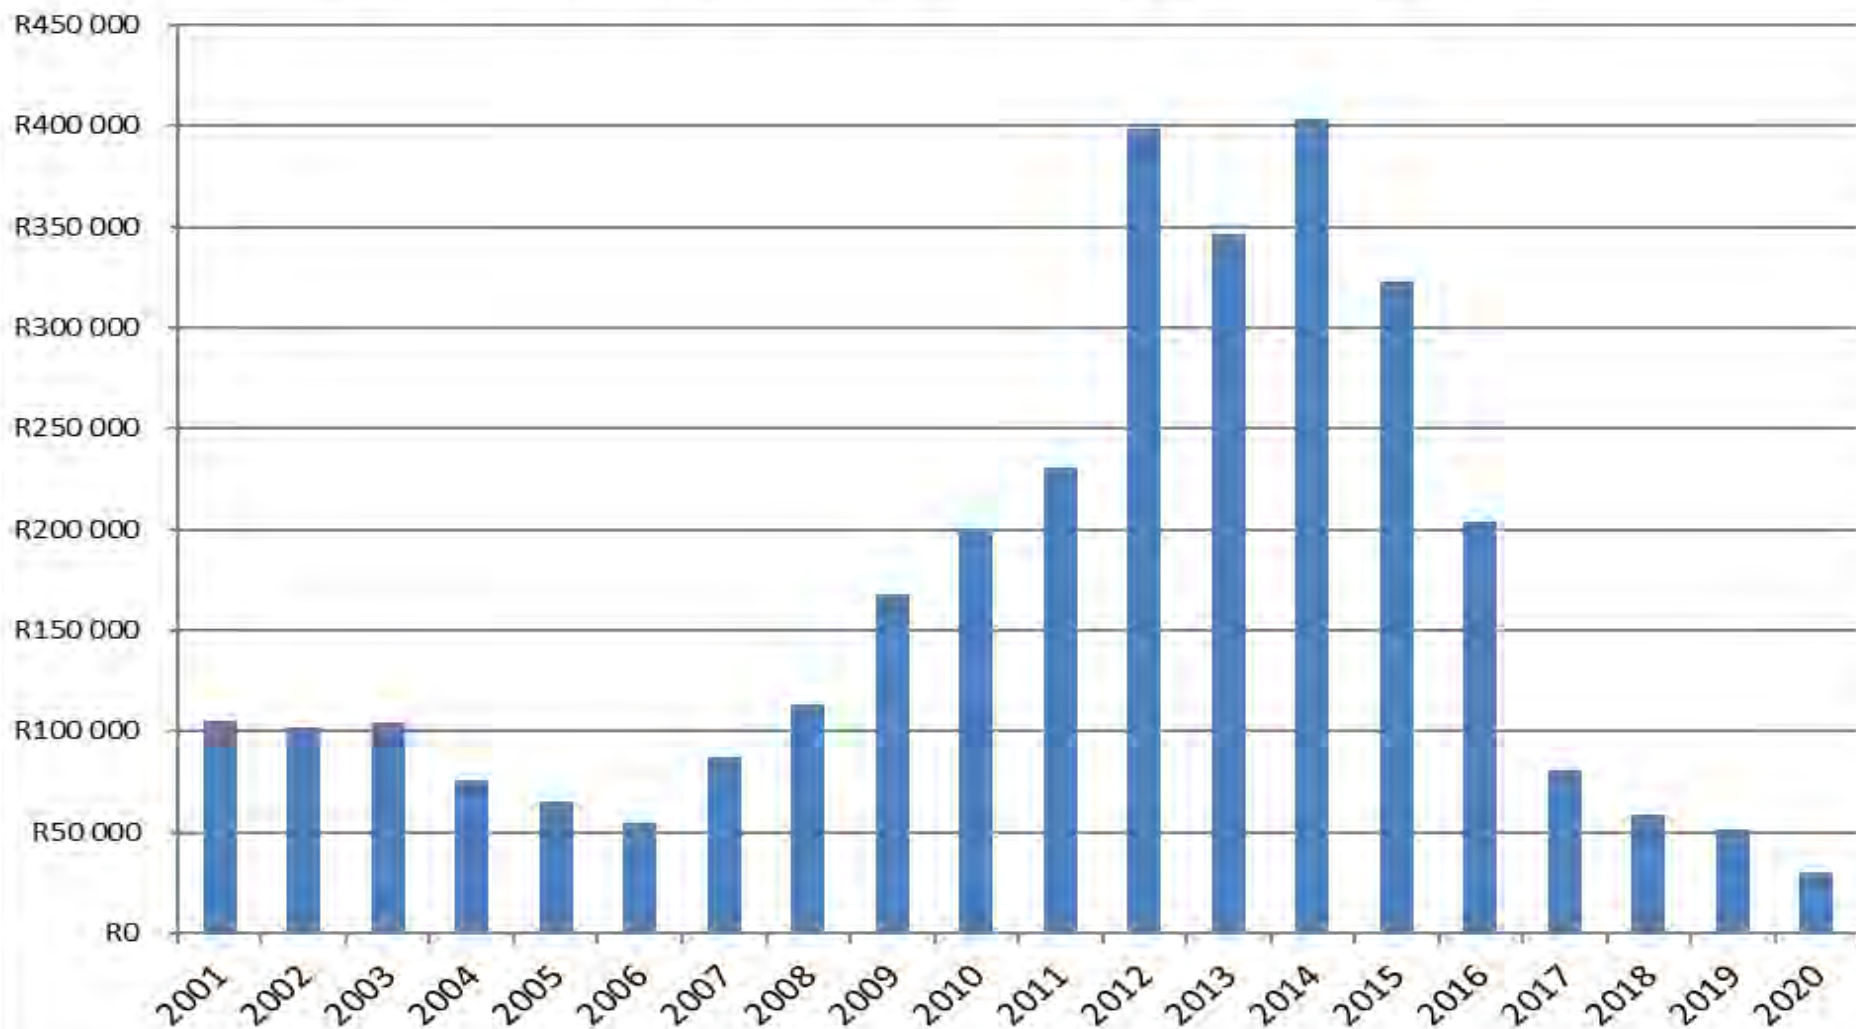

Rare Game quantity of animals sold auctions

Rare Game Average pricing per animal on auctions per year

Pricing Trends of game on auction - Rare Game

➤ Buffalo Analysis

- Percentage of Buffalo sales of total game sales in industry:
 - 40% of all game sales in 2017;
 - 45% of all game sales in 2018;
 - 52% of all game sales in 2019;
 - 33% of all game sales in 2020.
- Average Pricing achieved on game sales for Buffalo:
 - 2016 - R944 387;
 - 2017 - R502 514;
 - 2018 - R401 496;
 - 2019 - R315 922;
 - 2020 - R143 824;
 - Average pricing on Buffalo reduced by 54% from 2019 to 2020 year;
 - If you eliminate high value Buffalo from data, then the average pricing of Buffalo cows sold on auction varied between R25 000 to R35 000 per Buffalo cow;
 - Hunting Buffalo bulls older than 6 years with hard boss sold on average between R65 000 to R120 000 depending on the spread of the bull's horns and size of the boss.
- Quantities of Buffalo on sale on auctions:
 - 2016 - 598 Buffalo sold, a decrease of 3%;
 - 2017 - 743 Buffalo sold, an increase of 24%;
 - 2018 - 671 Buffalo sold, a decrease of 10%;
 - 2019 - 781 Buffalo sold, an increase of 16%;
 - 2020 - 387 Buffalo sold, a decrease of 50%.

Pricing Trends of game on auction - Rare Game

➤ Sable Analysis

- Percentage of Sable sales of total game sales in industry:
 - 24% of all game sales in 2017;
 - 23% of all game sales in 2018;
 - 13% of all game sales in 2019;
 - 13% of all game sales in 2020.
- Average Pricing achieved on game sales for Sable:
 - 2016 - R286 957;
 - 2017 - R134 046;
 - 2018 - R 81 984;
 - 2019 - R 38 443;
 - 2020 - R 21 652;
 - Average pricing on Sable reduced by 44% from 2019 to 2020 ;
 - If you eliminate high value Sable from data, then the average pricing of Sable cows sold on auction varied between R6 500 to R15 000 per Sable cow;
 - Hunting Sable bulls older than 4 years sold on average between R12 000 to R300 000 depending on the spread and length of the horns. Sable bull prices are on average sold at between R400 to R500 per inch in 2020. Only bulls with horn sizes of 44 inches and more achieved R500 per inch and more.

Pricing trends of game on auction – Plains Game

- Detailed analysis of the plains game prices over the past four years have indicated that the plains game prices were reasonably stable compared to the rare game market.
- The plains game market on average shows a decrease in game prices for certain species and increase in prices for the most sought after species in 2020.
- Quantities sold on auction increased substantially during the 2015 and 2016 peak but returned to normal quantities in 2017 and decreased by 21% in the 2018 season with an 11% increase in quantities in 2019 and a 40% decrease in 2020 quantities due to the impact of COVID-19.
- Statistical data were analysed in detail per specie per category for all plains game species.

Wildlife Industry Trends and Analysis

TOTAL PLAINS GAME ON AUCTION

- Total revenue generated from plains game sales:
 - 2017 revenue declined by 22%.
 - 2018 revenue declined by 34%.
 - 2019 revenue declined by 4%.
 - 2020 revenue declined by 47%
- Total number of plains game animals sold on auction:
 - 2017 quantities declined by 3%.
 - 2018 quantities declined by 21%.
 - 2019 quantities increased by 11%.
 - 2020 quantities declined by 40%.

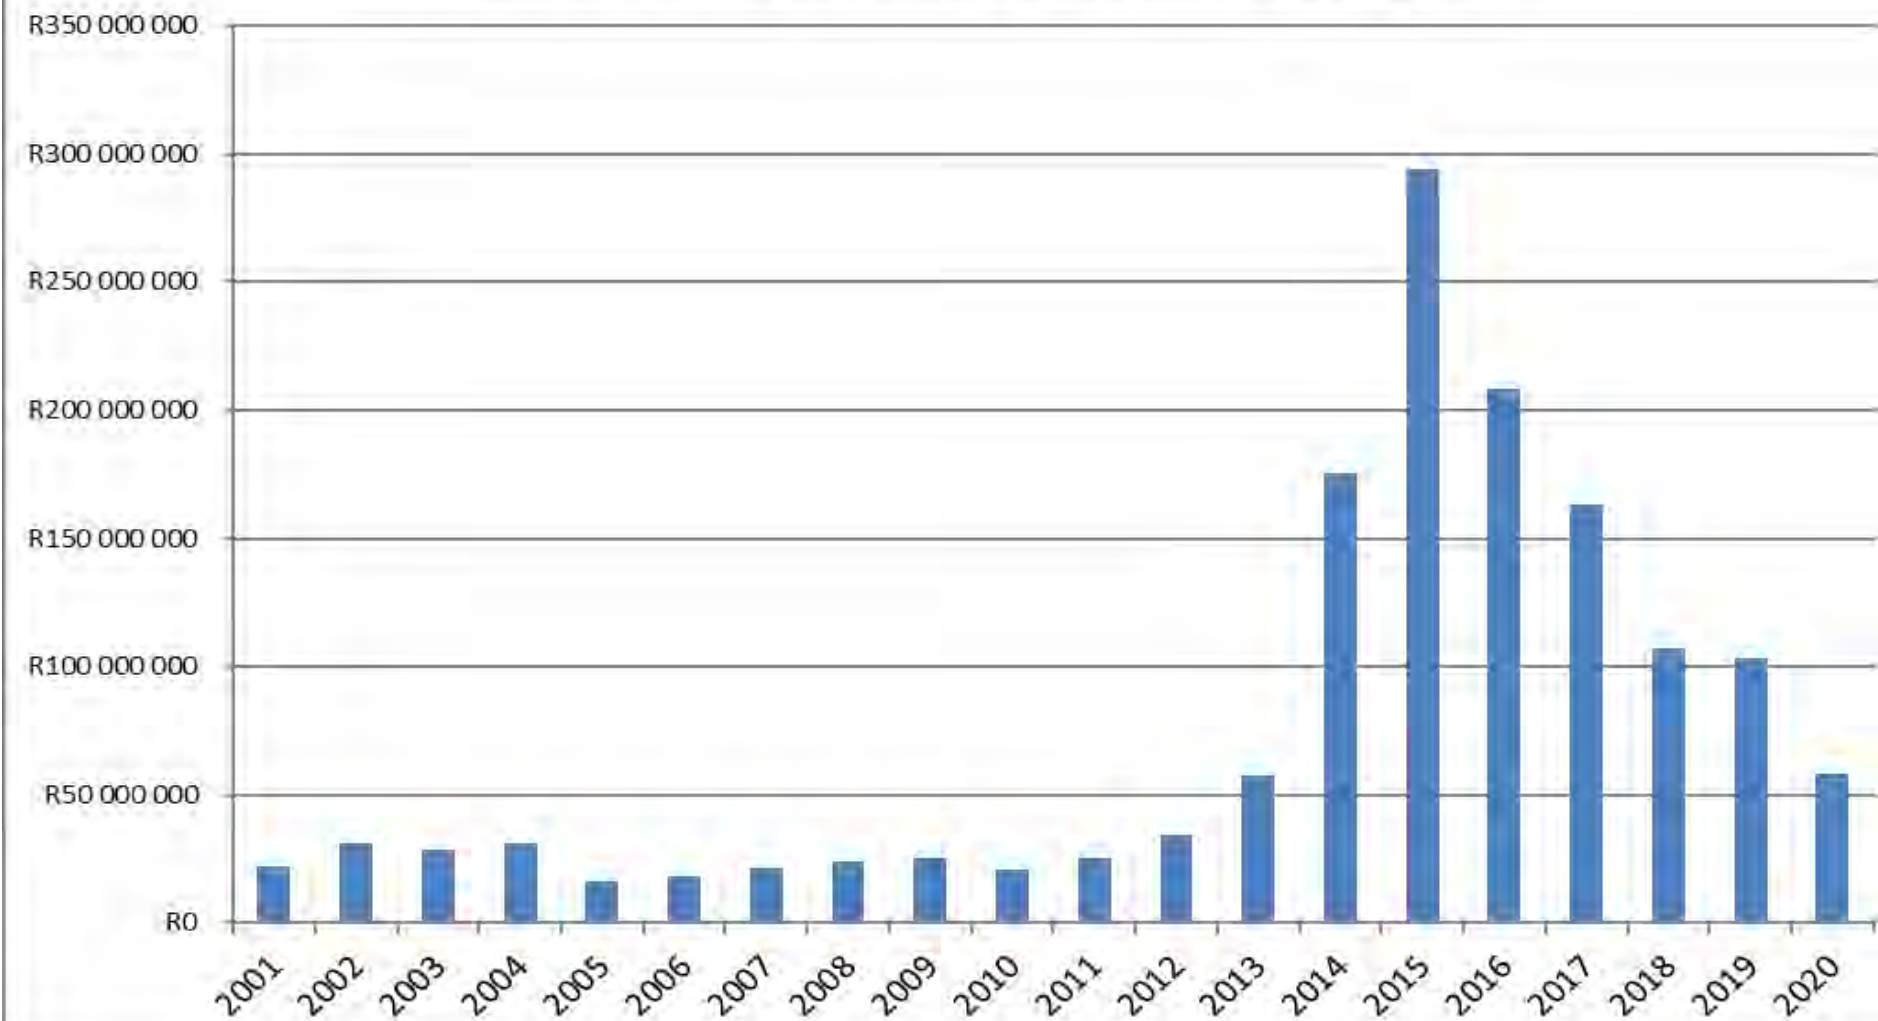

Wildlife Industry Trends and Analysis

➤ <u>Price comparison: Plains Game Price%</u>		<u>Quantity%</u>
▪ Redhartebeest	+ 33%	- 65%
▪ Bluewildebeest	+ 8%	- 24%
▪ Blesbuck	+ 6%	- 28%
▪ Zebra	+ 3%	- 32%
▪ Impala	+ 2%	- 31%
▪ Giraffe	- 11%	- 22%
▪ Gemsbuck	- 13%	- 41%
▪ Eland	- 28%	- 10%
▪ Waterbuck	- 30%	- 38%
▪ Kudu	- 40%	- 28%
▪ Nyala	- 40%	- 40%
▪ TOTAL PLAINS GAME	- 13%	- 40%

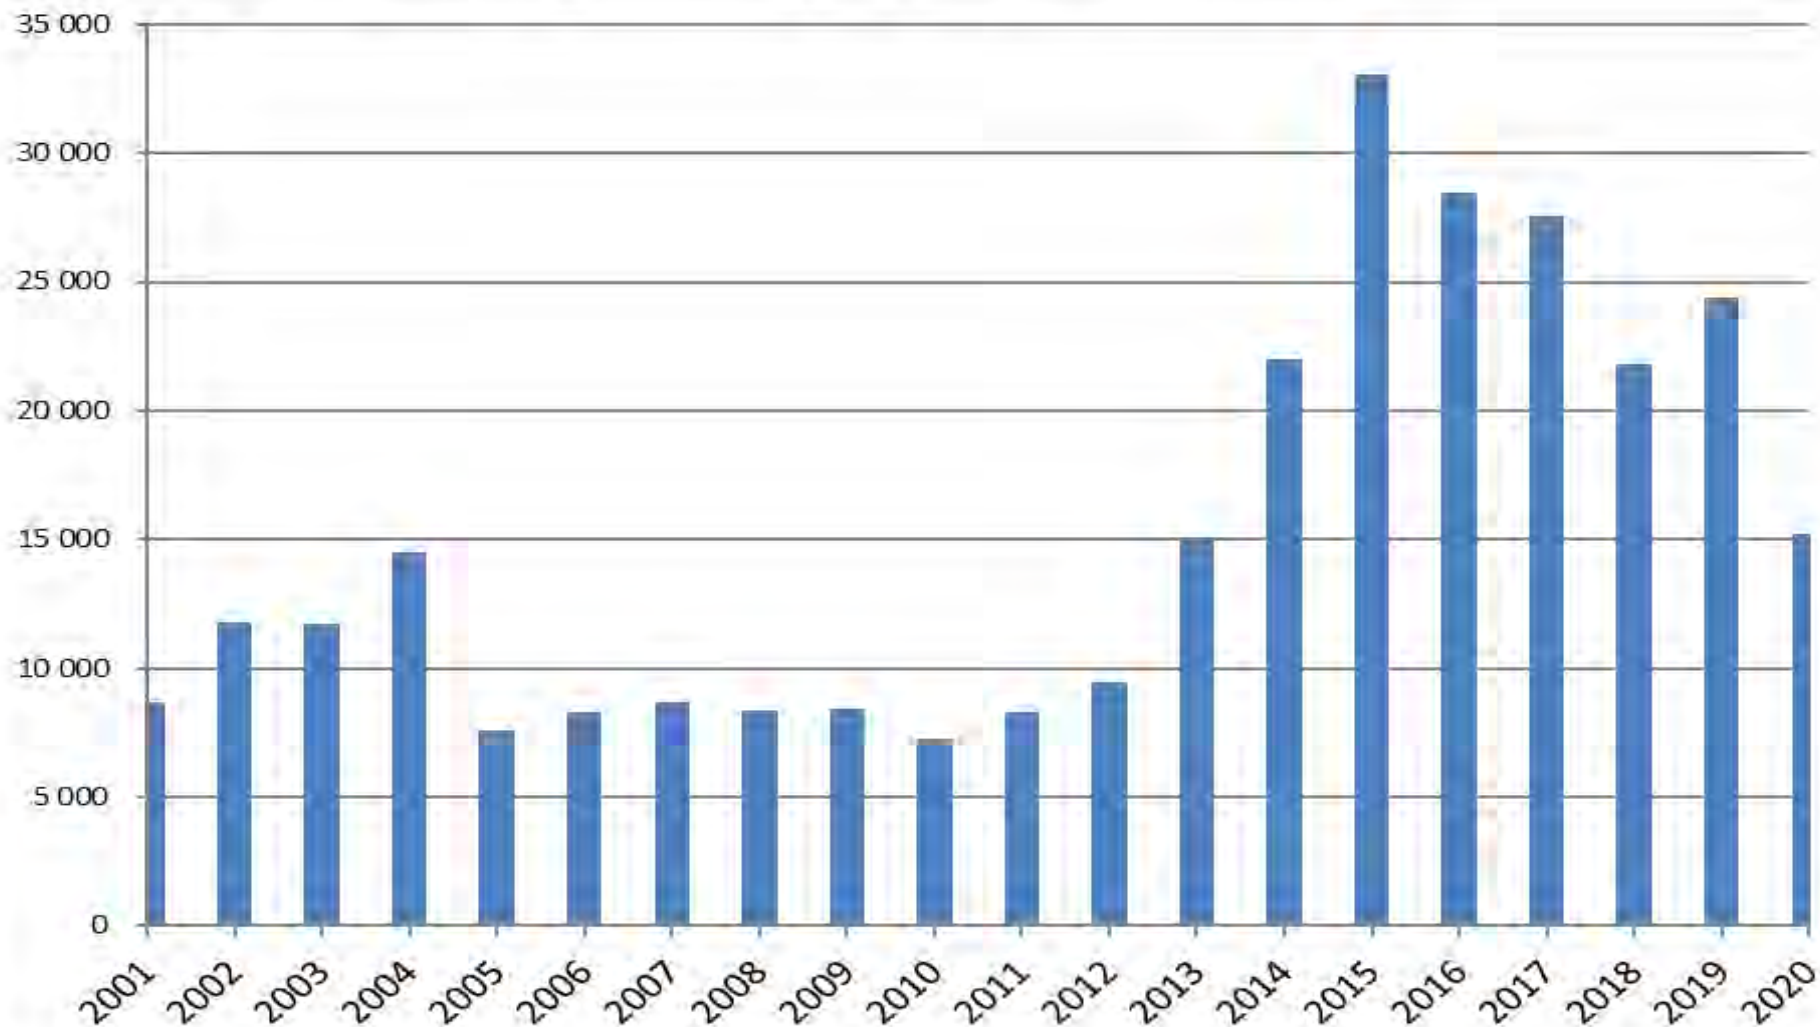

Kudu, Waterbuck and Gemsbuck prices were impacted by the low demand for hunting bulls that drove the average prices for these species down. Redhartebeest prices increased substantially due to a shortage of supply in the market. Bluewildebeest, Blesbuck and Impala specie prices continued to increase during 2020.

Normal Waterbuck Average price per animal

Future auction trends in the game industry

- The game auction industry in South Africa is starting to evolve to cater for the major changes in the industry.
- These changes are forced on the market due to the reduction and reset in the rare game pricing and the substantial increase in demand for quality hunting game, mostly bulls.
- The demand in game species is completely moving away from a requirement for rare game breeding mostly to be dominated again by the hunting market and demand for quality hunting game.
- We believe this trend is already prevalent in the market , whereby major specialised rare game auctions are now offering quality hunting animals as part of their product on auction.

Future auction trends in the game industry

- These changes in the market will force the game auction industry to adapt their strategies and cater for a shift in the demand and offerings available to adapt to these new waves sweeping the game industry.
- We believe the days of very expensive and elaborate auctions and marketing campaigns are something of the past.
- More and more game auctions are moving to change their offering and marketing campaigns to adjust to these major price reductions in the market and change in demand of their clients.
- No longer can game breeding associations afford the high cost of auctions and spend huge amounts of money on campaigns for these auctions.

Future auction trends in the game industry

- The average cost of these auctions need to be more in line to the new pricing of animals available and will force these associations to adjust their strategies to become more cost effective in selling and marketing of game on auctions.
- Market trends currently indicate that fewer major specialised game auctions will occur in the future and that more and more “mixed” game auctions will be the offering of the day.
- This trend will also impact the number of rare breeding associations auctions in the future. This was already prevalent in the 2020 auction calendar year.
- The pricing of game has also severely impacted on the agent market and there are very few game agents left in the industry.

Future auction trends in the game industry

We believe that in the future there will only be six to seven very specialised (rare game only) game auctions per season, offering exceptional genetics and quality animals for the breeding game market mostly. The rest of the auctions will be rare and hunting game auctions mixed offerings to the market. The market for 2020 indicates that the industry is slowly moving to five auction principles in the future namely:

- Very specialised high quality game auctions, offering mostly exceptional genetics to the rare game breeding market;
- Mixed auctions offering a broad spectrum of rare game as well as quality hunting game and a selection of normal plains game;
- Plains game auctions with a selection of a few specialised hunting animals.
- These auctions will mostly be regionally based and will offer game to the local market in the area and also cater for the fast growing game meat market;
- Online Timed and Real Time Auctions offering a wide spread of game to the market. This market segment is the fastest growing segment in the industry and is following the pattern of the rest of the world with the demand for cost effective online auctions. COVID-19 has also excelled the growth in the online market.

Future auction trends in the game industry

- The game industry is evolving and changing dramatically day to day and the market and auction industry will need to adapt quickly to these trends or certain players will not survive.
- The ability to adapt and change strategies will be the driving force for industry players to survive this change in the industry.
- Low cost comprehensive auction solutions, offering a holistic approach to the industry will be a requirement to stay prevalent in the game industry.
- Analysing buying patterns and trends of current game auctions, indicates that the major rare game breeders are buying less and less animals on auction.
- These breeders dominated the auction industry in the past but currently are only interested in buying exceptional genetics offered on auctions.

Future auction trends in the game industry

- This trend has drastically reduced the demand on the specialised rare game auctions.
- The market is therefore moving to a much wider spread of base clients dominated by major hunting farms and very interesting, new entrants to the game farm industry.
- These new entrées are benefiting from the reduced game prices and therefore the barriers of entry have come down , allowing these new entrées to participate in the game industry market.
- Another big factor is the reduction of the number of people attending these large specialised auctions. The market will need to adjust and cater for these changes to ensure sustainability and continued growth in the industry.

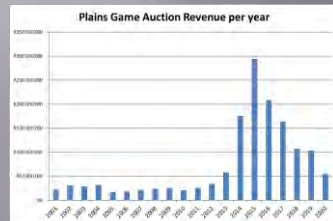

Future auction trends in the game industry

- The plains game and hunting market is currently the main driver behind the growth in the game industry.
- The plains game industry is experiencing a shortfall in supply of game to the auction industry.
- The past few months has seen a drastic drop in available quantities of game and we foresee this to continue in 2021.
- This trend will most probably have an impact on the plains game pricing and we anticipate the prices of plains and hunting game to increase substantially in 2021 due to this shortfall .

Future auction trends in the game industry

- Information and technology will play a much bigger part in auctions in the future. Online auctions during hosted auctions will grow exponentially year on year. Online Internet auctions will become a major part of industry in future. 50% Of all auction income in 2020 were generated on the online media.
- WhatsApp, twitter and electronic marketing will continue to grow as a marketing medium.
- The offerings and marketing on the day will become more and more part of auctions.
- Agent marketing will become less and less due to the price decrease in game.

SUMMARY: AWA WILDLIFE TRENDS ANALYSIS FOR 2020

The auction statistical data has been compiled from information obtained from websites, printed media and information available in the public domain.

The views expressed in this document are those of African Wildlife Auctions and are based on information collated from the industry and feedback from customers.
